

**AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) A golf club head comprising:

a relatively thin shell comprising a plurality of walls that collectively form a hollow body with a substantially empty or voided cavity;

said club head having an opening defined therein; and

a plurality of weights readily user-repositionably secured to said shell of said club head at readily user-accessible spaced-apart locations along the walls of the shell to adjust the center of gravity of the golf club head,

at least one of said weights being securable in a location that is substantially non-co-linear with the others of said weights to permit adjustment of the center of gravity of the golf club head in at least two axes,

at least one of said weights being user-repositionably disposable near the rear of the club head, left of the center-line of the head,

at least one of said weights being user-repositionably disposable near the rear of the club head, right of the center-line of the head,

at least one of said weights being user-repositionably disposable near the front of said club head,

each of said weights being interchangeably repositionable by the user at each of said locations.

2. (Currently Amended) The golf club head of Claim 1, further comprising a user-accessible threadably attachable member eover for closing threadably attached to the opening , said threadably attachable member having a weight user-repositionably secured thereon.

3. (Currently Amended) The golf club head of Claim 2, further comprising a vibration-dampening material interposed between the threadably attachable member eover and the opening formed through the housing.

4. (Previously Presented) The golf club head of Claim 1, wherein the opening is located on the sole of the housing.

5. (Previously Presented) The golf club head of Claim 1, wherein the opening is located on a crown of the housing.

6. (Previously Presented) The golf club head of Claim 1, wherein the opening is located on the shell of the housing.

7. (Original) The golf club head of Claim 1, wherein the housing forms at least a portion of a head of a golf wood.

8. (Original) The golf club head of Claim 1, wherein the housing forms at least a portion of a head of a golf iron.

9. (Original) The golf club head of Claim 1, wherein the housing forms at least a portion of a head of a golf putter.

10. (Currently Amended) A golf club head having an adjustable center of gravity, comprising:

a relatively thin shell comprising a plurality of walls that collectively form a hollow body with a substantially empty or voided cavity;

an opening into said cavity;

a removable cover for selectively covering and uncovering the opening; [[and]]

a plurality of weights readily user-repositionably secured to said shell of said club head at readily user-accessible spaced-apart locations along the walls of the shell to adjust the center of gravity of the golf club,

at least one of said weights being securable in a location that is substantially non-co-linear with the others of said weights to permit adjustment of the center of gravity of the golf club head in at least two axes,

at least one of said weights being user-repositionably disposable near the rear of the club head, left of the center-line of the head,

at least one of said weights being user-repositionably disposable near the rear of the club head, right of the center-line of the head,

at least one of said weights being user-repositionably disposable near the front of said club head,

each of said weights being interchangeably repositionable by the user at each of said locations.

11. (Previously Presented) The golf club head of Claim 10, further comprising a vibration-dampener interposed between the weighting port cover and the body to reduce vibration of the cover.

12. (Previously Presented) The golf club head of Claim 10, further comprising a vibration dampener secured to the closure of the opening.

13. (Previously Presented) The golf club head of Claim 10, wherein the opening is located on the sole of the golf club head.

14. (Previously Presented) The golf club head of Claim 10, wherein the opening is located on the crown of the golf club head.

15. (Previously Presented) The golf club head of Claim 10, wherein the opening is located on the shell of the golf club head.

16. (Original) The golf club head of Claim 10, wherein the golf club head forms at least a portion of a golf wood.

17. (Original) The golf club head of Claim 10, wherein the golf club head forms at least a portion of a golf iron.

18. (Original) The golf club head of Claim 10, wherein the golf club head forms at least a portion of a golf putter.

19. (Currently Amended) A golf club head with an adjustable center of gravity, comprising:

a relatively thin shell comprising a plurality of walls that collectively form a hollow body with a substantially empty or voided cavity;

an opening; [[and]]

a plurality of weights readily user-repositionably secured to said shell of said club head at readily user-accessible spaced-apart locations along the walls of the shell to adjust the center of gravity of the golf club head,

at least one of said weights being securable in a location that is substantially non-co-linear with the others of said weights to permit adjustment of the center of gravity of the golf club head in at least two axes,

at least one of said weights being user-repositionably disposable near the rear of the club head, left of the center-line of the head,

at least one of said weights being user-repositionably disposable near the rear of the club head, right of the center-line of the head,

at least one of said weights being user-repositionably disposable near the front of said club head,

each of said weights being interchangeably repositionable by the user at each of said locations, and

a closure for covering the opening into the cavity following placement of said weights within the cavity.

20. (Previously Presented) The golf club head of Claim 19, wherein said weights comprise at least one strip of lead tape adhesively secured to the inside surface of the shell inside the cavity at a position other than the center of gravity of the golf club head.

21. (Previously Presented) The golf club head of Claim 19, wherein the closure fits substantially flush with the external surface of the golf club head surrounding the opening.

22. (Previously Presented) The golf club head of Claim 19, further comprising a dampener for reducing vibration of the closure when the closure covers the opening.

23. (Previously Presented) The golf club head of Claim 22, wherein the dampener comprises vibration dampening material compressed between at least a portion of the housing and the closure.

24. (Currently Amended) The golf club head of Claim 22, wherein the dampener is in contact with the ~~port~~ closure.

25. (Previously Presented) The golf club head of Claim 1, wherein at least one weight is located at or near a low-back-center location.

26. (Previously Presented) The golf club head of Claim 1, wherein at least one weight is located at a low-back-toe location.

27. (Previously Presented) The golf club head of Claim 1, wherein at least one weight is located at a low-back-heel location.

28. (Previously Presented) The golf club head of Claim 19, wherein at least one weight is secured to inside of the cover.
